

# Techniques

Frequency Counter

dictionary (using)

- check in 2 string, 2 arrays
- find the occurrence, frequency of (string, array)
- find the duplicated / count of (string or array)

anagram, permutation, match patterns  
"aabb" "ccdd"

pseudo code

arr1, arr2  
lengths are comparable  
initialise a dictionary  
for each elem in arr1:  
    store element in dict  
for each elem in arr2:  
    if compare dictionary  
    else

Space  
O(N)  
Time  
O(N)

## Sliding Window

- subarray, substring
- longest, shortest, maximum, min sequence
- distinct chars
- window / subarray size

[1, 4, 6, 9, 10, 2]

subarray = [10, 2]  
subarray = [6, 9, 10]

output [ ]  
av. of subarray  
4.3

$$\frac{1+2+3}{3}$$

[4, 5, 6, 7, 4]

4: 3  
5: 1  
6: 1  
7: 1  
S: 1  
+ 1.2

4  
2  
2

4  
2  
2

2 "a b d g s t p i r o t u"
