

Linked list
↳ allocate memory dynamically

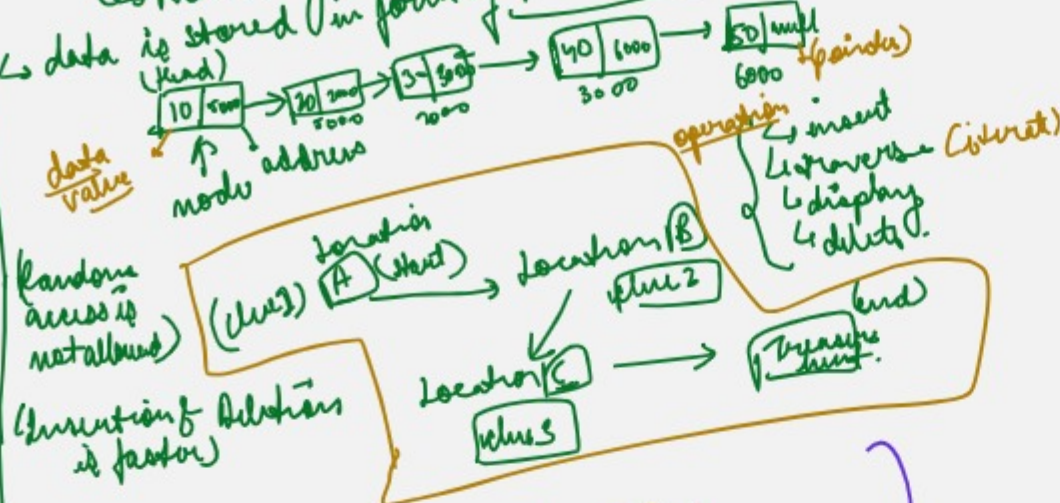

Iterating

↳ Insertion & Deletion is slower
↳ through index

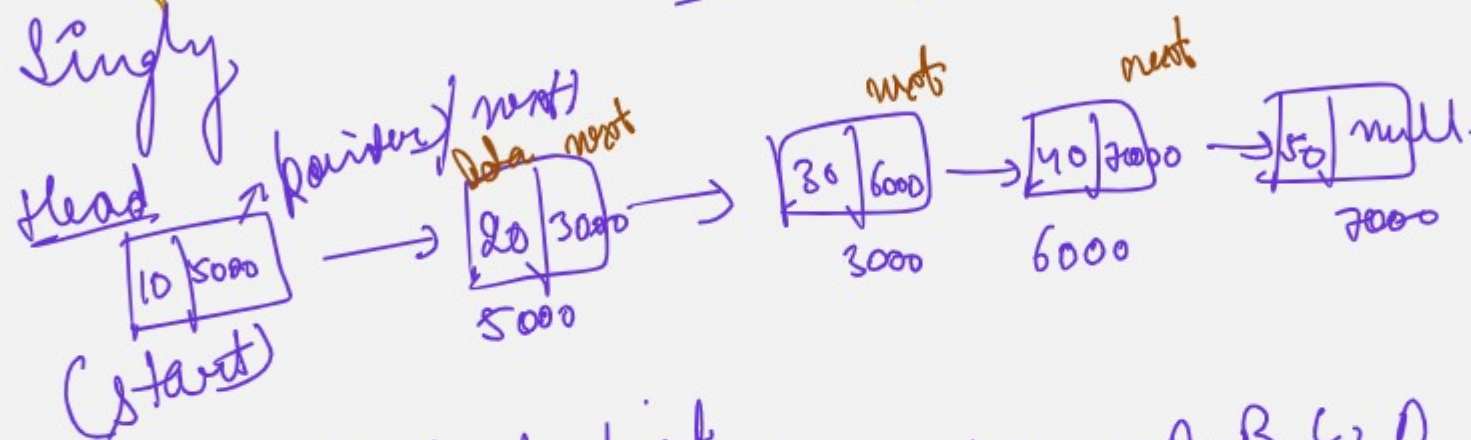

Array vs linked list

↳ CPU processing
↳ audio streaming platform
↳ Networking
↳ data is stored in form of nodes and pointers

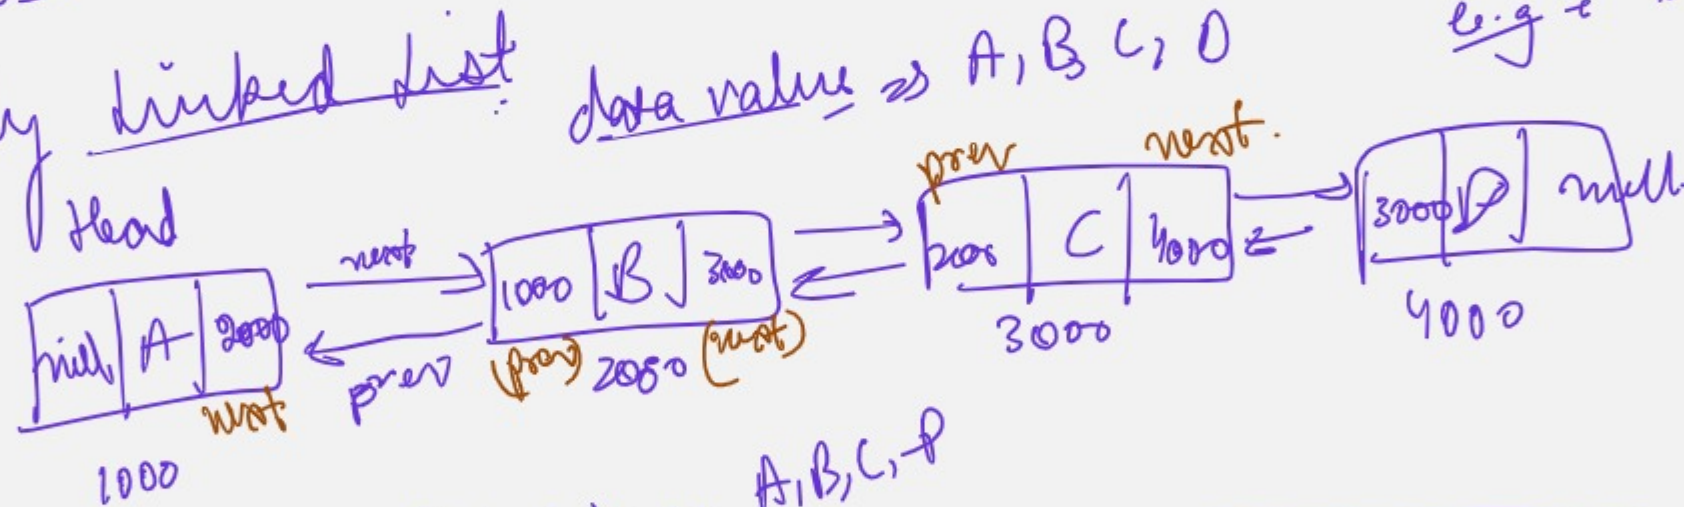

Types of linked list

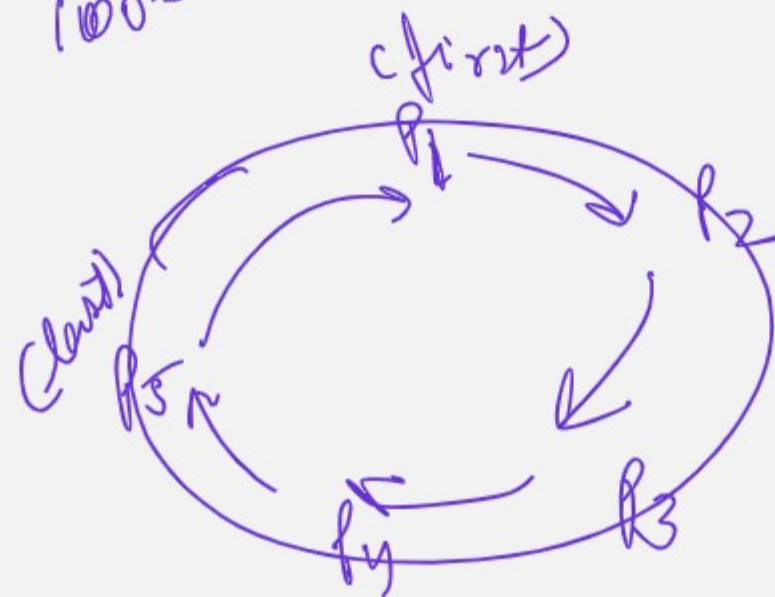

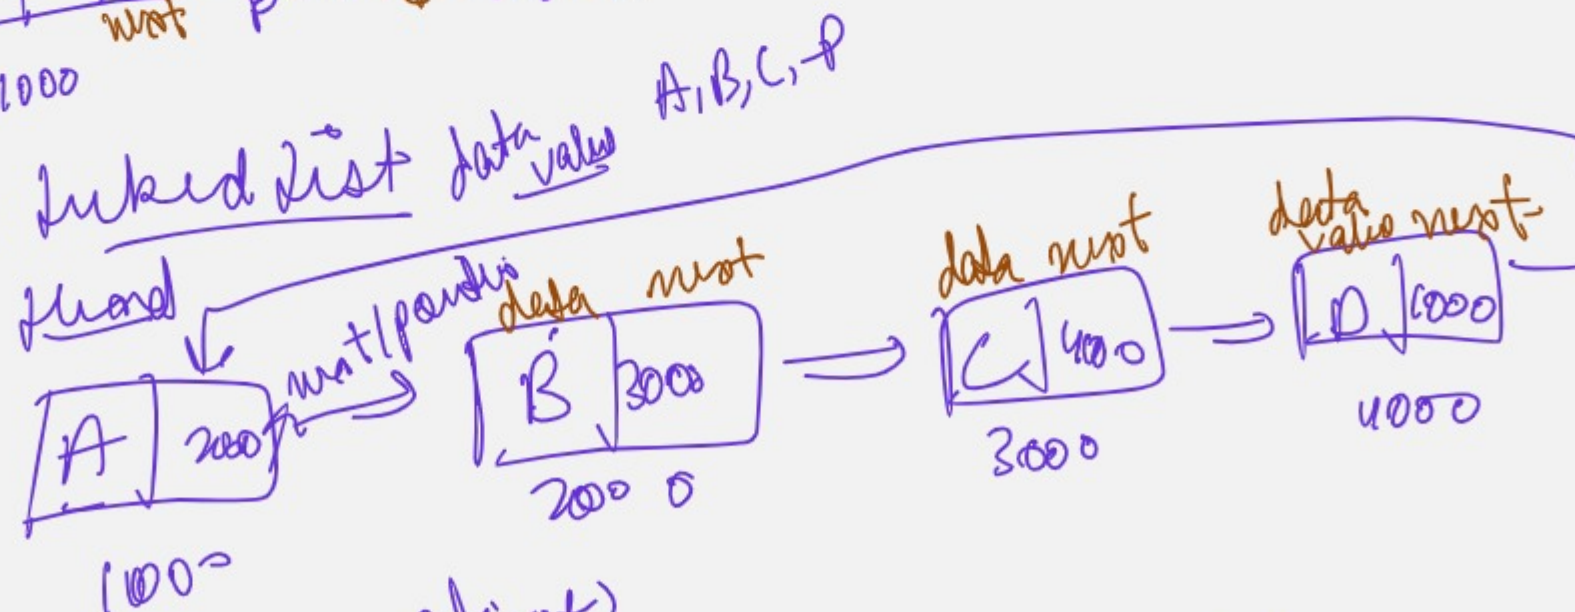

① Singly

② Doubly linked list

③ Circular linked list

5 persons

In Code,

nodes are stored in the form of object
[node = { data, next }]

e.g. = Browser history (prev and next buttons)
