sorting algorithms
Bubble
selection
Insertion
merge
Quick
Time
space
in-place algorithm (no extra memory)
small dataset
large dataset
Bubble sort (pass) (in-place) (improve passes)
input
output = [2, 3, 5, 6, 9]
compare
swap
1st pass
2nd pass
swapped = false
Selection sort
(k th smallest)
smallest = arr[0]
swap
Insertion sort
sort array by parts
insertion
insert
swapper
Recursion
call a function within a function, till condition is true
Pivot
(k th largest element)
left
right
Merge sort (Divide and conquer)
Divide
compare while merge
elements
compare
new array
result
